

**SUMMER COTTAGE -
WINTER GET AWAY -
SEASONAL HOME**

**WHILE YOU ARE AWAY,
IS SOMEONE TAKING
CARE OF YOUR HOME?**

THIS IS NOT A BURGLAR ALARM

BURGLAR ALARMS

You may already have your home protected by a Security Service. But if you are hundreds or thousands of miles away, will you know what is happening in your home? Did you know that of police responded alarms, 98% turned out to be false alarms. The Tbox is not a burglar alarm. It is a wireless alarm monitor that will text message your cell phone if conditions being monitored in your home change. You can be thousands of miles away. It does not require a phone line.

MONITOR MOTION

The Tbox will accept contact closures as generated by motion detectors. It can be configured to text message you when it detects any motion and then wait two minutes. If the motion is still present it will send you another text message and wait again. This way you are sure that it is not a false alarm and how long the intruder is present.

MONITOR OTHER CONDITIONS

The Tbox will accept up to four digital inputs (contact closures) and two analog inputs. It also has four relays that can be programmed to respond to the inputs. The digital inputs could be from switches such as motion, photo electric, pressure, airflow, humidity, liquid level or temperature. The analog inputs could come from pressure, temperature or motor speed.

WHY SHOULD YOU KNOW

Although you may be miles away, you are still very concerned about your property. Alarm services may not be able to reach you. By knowing the status of your home, you can judge what to do. The conditions may allow you to have a neighbor look in on it or a service that will take care of it. With the Tbox, you receive the knowledge to act immediately to protect your home.
