

“Someone stole what?”

Has your day ever started like this?

A burglar alarm just won't work

Have you tried the Tbox?

The Tbox is NOT a burglar alarm

The Tbox is a Wireless Alarm Monitor that “Text Messages” your cell phone when conditions change that you are monitoring. There is no service to go through for high monthly fees. It does not call the police with constant “false alarms” You choose who it “text messages” as well as the message.

Monitor Motion and More

The Tbox can detect the alarm contacts from a motion sensor. It can be configured to text message you when the sensor detects motion and then wait two minutes. If the motion is still present, it will send another text message and wait another two minutes. Once there is no longer motion detected, the text messaging stops. This way you can be sure it is not a false alarm and determine how long the

Wireless and Optional Battery Pack

The Tbox is wireless. You don't need any phone connection at your job site to send the text message. It is available with a 120 volt /24 volt power supply, or a battery pack. A NEMA 4 enclosure makes it is easy to install and once the job is completed, just pack it up and move to the next site.

The Tbox accepts 4 digital inputs (contact closures) and 2 analog inputs and has 4 output relays. The digital inputs can be switches like photo electric, motion, pressure, humidity, air flow, liquid level or temperature. The analog inputs can be from pressure, temperature or motor speed.

intruder has been there. The 4 digital inputs can be used for a combination of sensors, such as two motion controls and a photo electric sensor. The output relays can turn on lights or sound a horn. You can have several people receive the text message or different people depending upon the input signal. It is NOT a “recovery” device that requires you to contact the police when your property has been stolen.
